(a) The final temperature should be quite a bit lower than 60°C . The masses of the lead and water are the same, so the final temperature would be halfway between 100°C and 20°C only if the specific heats of water and lead were the same. Answers to selected problems from Essential Physics ... Compare Equation 13.8 and Equation 13.11 to see that they differ only in that the circular radius, r , is replaced by the semi-major axis, a . Therefore, the mean radius is one-half the sum of the aphelion and perihelion, the same as the semi-major axis. Answer Key Chapter 13 - University Physics
