Composting For Sustainable Agriculture Spilla Composting can be considered a C-based system, similar to reforestation, agricultural management practices, or other waste management industries and is one of the most frequently alternatives to landfill (Brown et al., 2008, Quirós et al., 2014). In addition, composting decreases environmental problems related to wastes management by decreasing waste volumes and by killing potentially dangerous organisms. Composting: The way for a sustainable agriculture ... The use of composted manures in sustainable agricultural systems results in good yields and equivalent or improved quality

leftover crop residues, weeds, and manures. Many types of local organic waste, such as apple pumice, lake weeds, leaves, and grass clippings, can be composted. There is evidence that compost application lowers the incidence of plant root and leaf diseases, as mentioned. Advantages of Composting - SARE Composting is a sustainable waste management practice that converts any volume of accumulated organic waste into a usable product. When organic wastes are broken down by microorganisms in a heat-generating environment, waste volume is reduced, many harmful organisms are destroyed, and a useful, potentially marketable, product is produced. Waste Management and Composting -

Center for Agriculture

... Composting these wastes creates a product that can be used to help improve soils, grow the next generation of crops, and improve water quality. Nationally, the composting of food rose from 1.84 million tons in 2013 (5.0 percent of food) to 2.6 million tons (6.3 percent of food) in 2017.
