Autodesk Hi! This has something do with how Inventor derives the objects. The sketch and the solid body are both derived from the source part. In the derive part, the derived sketch and the derived body are like a clone of the source geometry. Move a derived part - Autodesk Community Inventor runs slow while handle the assembly as I expect it to. so to speed things up I decided replace the smaller assemliies with a derived assembly. So no I have a large assembly made up of parts and derived assemblies, this however has made things slower now the memory usage bar very quickly moves to the yellow
