Disc Brake Diagram | HowStuffWorks Brake pads: metal plates bonded with material that provides stopping friction. One or two pistons to push the brake pads against the rotor when you brake. A bleeder screw to allow for servicing the brakes and replacing the fluid. A rubber piston seal that prevents brake fluid leakage and retracts the piston when the brakes release. Complete Guide to Disc Brakes and Drum Brakes - Les Schwab A brake rotor consists of two discs for the pads to press against, and a ribbed support between the discs for heat dissipation. The friction between the pads and rotors converts rotational energy into heat, bringing your vehicle to a stop. This friction warps the rotors over time. Warped rotors provide less consistent contact between your pads ...
