The Specific Gravity of liquids and solids is defined as a dimensionless unit which is the ratio of density of a material to the density of water at a given temperature, where density is defined as the material's mass per unit volume and

is measured in kg/m^3 . The temperature and pressure of both the material and water need to be the same as these factors influence ... specific gravity - calculator.org A peer-reviewed journal that covers the latest activities in the field of applied mechanics that relate to civil engineering, including bioengineering, computational mechanics, computer-aided engineering, dynamics of structures, elasticity, experimental analysis and instrumentation, fluid mechanics, flow of granular media, inelastic behavior of solids and structures, probabilistic methods ...
