On just about any hot-shoe strobe capable of manual, there's a guide number calculator built in. The photo up top is from a Vivitar 285HV, which is a 70's-design manual-capable flash. Let's use this as an example. The four variables are: F/stop, distance, power and ISO. You plug in any three, and the calculator spits out the fourth.

Strobist: Guide Number: Your Free Flash Meter

In the above snippet, we're listening for a click event on the element with a class of calculator-keys. Since all the keys on the calculator are children of this element, the click event filters down to them too. This is known as event delegation. Inside the callback function of the event listener, we extract the target property of the click event using destructuring assignment which makes it ...
