Guidelines for Vapor Cloud Explosion, Pressure Vessel ... Vapor cloud explosion: The explosion resulting from the ignition of a cloud of flammable vapor, gas, or mist in which flame speeds accelerate to sufficiently high velocities to produce significant overpressure. View factor: The ratio of the incident radiation received by a surface to the emissive power from the emitting surface per unit area. Guidelines for Evaluating the Characteristics of Vapor ... explosions in detail. As described in Chapter 2, a vapor cloud explosion is the result of a release of flammable material in the atmosphere, a subsequent dispersion phase, and, after some delay, an ignition of the vapor cloud. BASIC PRINCIPLES OF VAPOR CLOUD EXPLOSIONS caused by the outdoor release and delayed ignition of a flammable vapor cloud, This guideline uses a TNT equivalency methodology to evaluate approximate effects of a worst credible case vapor cloud explosion (VCE). Other refined VCE prediction or estimation methods, While briefly discussed, are beyond the scope of this document. FM Global Property Loss Prevention Data Sheet 7-42 (2008). When flammable liquids or vapors are released and form a vapor cloud, an ignition source can cause detonation, which in turn can generate a blast wave similar to that created by explosives and a significant release of radiant heat which can cause burns to personnel with exposed skin. VCE (Vapor Cloud Explosion) When an explosion is initiated, surrounding flammable gas is pushed to accelerate the speed when passing a narrow space, and at the result, VCE occurs. So in open space (outdoor) and not congested area, VCE may not occur in general. VCE/BLEVE/Fireball, Flash Fire - FPEC Corporation I call it "The clue everyone missed". That isn't a vapor cloud expanding outward from a surface explosion. It's a vapor cloud blasting straight up, in a separate location from the explosion (I estimate 150ish yards away). I've been
