The second mixed raw moment, which is $(E[N(t)N(s)])$, is called the auto-correlation function of the stochastic process. And the acf for Poisson process with parameter (λ) is $E[N(t)N(s)] = \lambda st + \lambda \min\{s, t\}, \quad s, t \geq 0$ Solutions to Stochastic Processes Ch.2 - $\square\square\square$ arXiv:cond-mat/0701242v1 [cond-mat.stat-mech] 11 Jan 2007 Introduction to the theory of stochastic processes and Brownian motion problems Lecture notes for a graduate course, by J. filtrations, the mathematical notion of information progression in time, and with the associated collection of stochastic processes called martingales. We treat both discrete and continuous time settings, emphasizing the importance of right-continuity of the sample path and filtration in the latter ... Stochastic Processes - Stanford University Galton-Watson tree is a branching stochastic process arising from Francis Galton's statistical investigation of the extinction of family names. The process models family names. Each vertex has a random number of offsprings. The figure shows the first four generations of a possible Galton-Watson tree. (Image by Dr. Hao Wu.)
