... The most common type of microstrip antenna is the patch antenna. Antennas using patches as constitutive elements in an array are also possible. A patch antenna is a narrowband, wide-beam antenna fabricated by etching the antenna element pattern in metal trace bonded to an insulating dielectric substrate, such as a printed circuit board, with a continuous metal layer bonded to the opposite side ... Consider the microstrip antenna shown in Figure 1, fed by a microstrip transmission line. Microstrip Antennas: The Patch Antenna Microstrip Patch Antennas (or simply patch antenna) are increasingly useful because the antenna is printed directly onto a circuit board. Additional benefits of patch antennas is that they are easily fabricated making them cost effective. Their low profile design, often square or rectangular, allows them to be mounted to flat surfaces. Microstrip Patch Antenna Calculator - Pasternack The basic design uses a rectangular U-slot microstrip patch antenna on suitable microwave substrates.
