And Microwave Engineering Behagi Turner File Type The rationale behind  
hybridizing RF-acoustics with photonics is to harness the best of both acoustic and  
photonic domains for signal processing at RF. Specifically, the lower loss  
propagation of lightwave and high sensitivity detection of photons are to be  
leveraged for RF functionalities that cannot be attained using conventional RF  
devices alone. Illinois Laboratory of Integrated RF Microsystems At low frequencies  
the entire cross sectional area is carrying the current. As the frequency increases  
to the RF and microwave region, the current flows much closer to the outside of  
the conductor. At the higher end of microwave frequency range, the current is  
essentially carried near the surface with.
